System Report for Web-Based Planning Website

Application Web Server

1. Hardware Tools for Application and Web Server
   a) Processor
      - Intel(R) Xeon(R) Silver 4314 CPU @ 2.40GHz (or equivalent AMD EPYC)
      - Minimum 8 cores / 16 threads
   b) RAM
      - 32GB DDR4/DDR5 ECC RDIMM (Expandable to 64GB for future scaling)
   c) Storage (HDD / SSD)
      - At least 1TB NVMe SSD
2. Software Tools for Application & Web Server
   a) Operating System
      - Windows Server 2022 Standard Edition or later versions
   b) Web Server
      - Microsoft Internet Information Services (IIS) v10 or later
      - IIS URL Rewrite Module
      - FastCGI (for PHP integration)
   c) Programming & Runtime Environment
      - PHP 8.2.12
      - Node.js 22.11.0
      - Composer 2.8.8
      - npm 11.2.0
      - Microsoft Visual C++ 2015–2022 Redistributable (x64)
   d) Frameworks & CMS
      - Laravel Framework v12.28.1 (Backoffice System)
      - WordPress (Latest Stable Version) – Public Website

Database Server

1. Hardware Specifications for Database Server
    a) Processor
        - Intel(R) Xeon(R) Silver 4314 CPU @ 2.40GHz
        - Minimum 8 cores
    b) RAM
        - 32GB DDR4/DDR5 ECC RDIMM
    c) Storage
        - At least 1TB NVMe SSD
        - RAID 1 or RAID 10 recommended for data redundancy
    d) Backup Storage
        - Daily automated backups (local + off-site/cloud)
2. Software Tools for Database Server
    a) Operating System
        - Windows Server 2022 Standard Edition or later versions
    b) Database Management System
        - MariaDB 10.4.32
        - MySQL Server 8.4
